| <input type="checkbox"/> | Dairy Cattle |
| <input type="checkbox"/> | Swine |
| <input type="checkbox"/> | Poultry |
| <input type="checkbox"/> | Small Ruminant |
| <input type="checkbox"/> | Other : _____ |

☐ Type III Shortage: Public Practice (at least 49 percent time*)

Employer: _____ Position Title: _____

Please select **one or more** specialty/disciplinary areas.

- | | |
|--------------------------|---------------|
| <input type="checkbox"/> | Food Safety |
| <input type="checkbox"/> | Public Health |
| <input type="checkbox"/> | Epidemiology |
| <input type="checkbox"/> | Other: _____ |

Please describe the objectives of a veterinarian meeting this shortage situation as well as being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

The objectives of the veterinarian filling the shortage situation in this area would be to assist in maintaining and improving animal welfare; maintaining the health of animals that contribute to an abundant, wholesome food supply; and maintaining and improving the veterinarian to food animal ratio. Further objectives would be to provide continuity for existing clientele and to fulfill the obligations of regulatory medicine for the State and Federal Governments. In addition, the state hopes to mitigate the vulnerability to emerging animal diseases by maintaining an appropriate veterinarian to animal ratio in this area. An existing practice is specifically looking for a veterinarian with specialized training in bovine animals who is a good educator and has basic knowledge of nutrition. A significant amount of practice time would be spent working with cow-calf and calf backgrounding operations. The veterinarian should be a knowledgeable practitioner who wants to live and practice in a rural setting.

Please describe the activities of a veterinarian meeting this shortage situation and being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

This veterinarian would become a skilled veterinary practitioner as well as increase the consulting time with clients. This veterinarian would also assist in improving the response time to clients and animal emergencies in a practice area with a high concentration of animals. The activities of this veterinarian will assist in developing and maintaining a community of sustainable food animal producers. Specific activities would include all phases of beef production including nutrition, herd management, obstetrics, fertility and basic medical procedures/diagnostics.

Please describe any past efforts to recruit and retain a veterinarian in the shortage situation identified above (limit your response to 100 words or less).

An existing practice has been trying to fill a position for the objectives as outlined above, but recruitment attempts have been unsuccessful due to concerns that the income potential for the food animal practitioners in this area is not competitive with other professional endeavors, particularly when considering the amount of educational debt that needs to be serviced.

Please describe the risk of this veterinarian position not being secured or retained. Include the risk(s) to the production of a safe and wholesome food supply and to animal, human, and environmental health not only in the community but in the region, state/insular area, nation, and/or international community (limit your response to 250 words or less).

There is currently only one part-time veterinarian servicing Pawnee County. With several doctors in Southeast Nebraska at or approaching retirement, it is believed many communities will experience a void in veterinary services. Therefore, without this veterinary position being secured, the area will continue to be underserved. This poor food animal to veterinarian ratio could adversely affect the welfare of food animals and negatively impact our safe, abundant food supply. Without adequate veterinarian expertise in this area, the state would lose the necessary skills that: educate current and future producers on how to manage their animals; give producers the knowledge that allows them to better care for their livestock; helps ensure a rapid response in the event of an animal disease situation; and continues to ensure safe and affordable animal products that feed the world population.

Please indicate whether you consider this situation/position a candidate for a "service in emergency" agreement (limit your response to 100 words or less). Please see solicitations for additional information regarding the obligation of participants who enter into the "Service in Emergency" agreement.

NA in 2011 round

Authorized State or Insular Area Animal Health Official or designee:

Name: Dr. Dennis Hughes

Title: State Veterinarian

Organization: Nebraska Department of Agriculture
